

## Rotary Seal

### Ncc

Ncc

### General description

End covers are components to be fitted in the housing bores where no input/output shaft is located. Moreover they are used to plug and seal service bores.

Standard end covers are manufactured in accordance with bore tolerances.

Two different types of end covers are available as described in the following chapters.

Material	Pressure (Bar)	Temp. (°C)
NBR -Carbon Steel	-	-40 +120

- Good static sealing
- Compensation of different thermal expansion
- No risk of fretting corrosion
- Effective protection against air side contaminants
- Higher bore surface roughness is allowed
- Mountion in split-housings
